Opportunity Management Application

Rohit Michael Gonsalves

Under the Mentorship of:

Mr. Rahul Soni (Java Backend)

And

Mr. Pratik Anand (Angular Frontend)

Objective

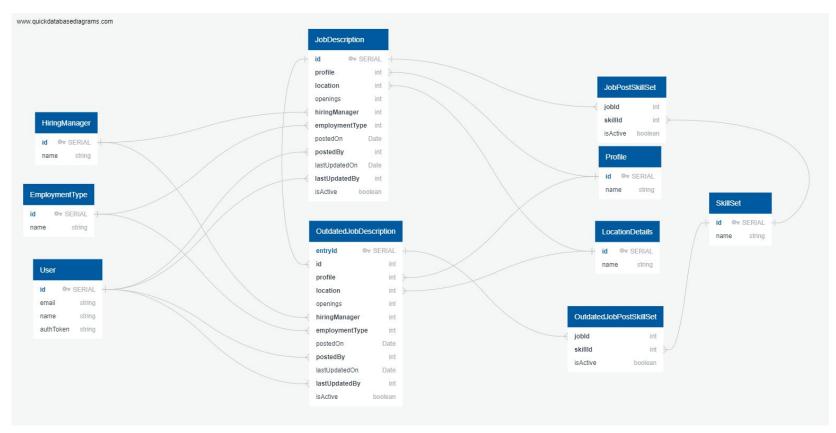

While using this application, a user must be able to:

- Authorise himself with his organizational Mail Id via Google.
- View Previously posted Opportunities.
- Add new Opportunity/Job postings.
- Restricted Edit Existing Job Postings.
- View Previous versions of Edited Job Postings
- Delete Job Postings.
- View Trends on the Active Job Postings.

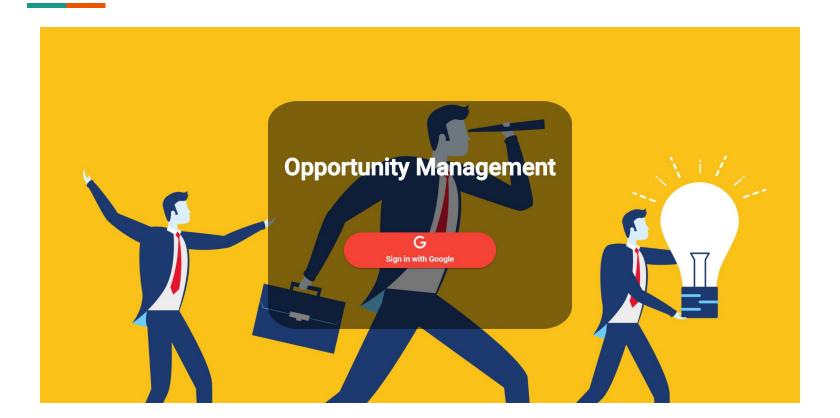

Tech Stack

- → Frontend:
 - Angular 9, TypeScript (Development Framework)
 - Charts.js (Insights)
 - ♦ Ng2-charts (angular engine for charts.js)
- → Backend
 - Java 8 (Development Language)
 - ◆ Spring BOOT(Server and EndPoints) (MVC Architecture followed with Controller, Service, DAO and Repository).
 - Spring JDBC and JdbcTemplate (Database Access and Querying engine)
 - PostgreSQL(Database)
 - ◆ JUnit Jupiter 5 + Mockito(Unit testing and Dependency Mocking)
 - Cucumber + JUnit Vintage Engine(Integration Testing)
 - Slf4j and LogBack (Logging)
 - SonarLint for Code Smells
